 <p>MINISTERIO DE GANADERÍA AGRICULTURA Y PESCA REPÚBLICA ORIENTAL DEL URUGUAY</p>	<p>MANUAL DEL PROGRAMA NACIONAL DE RESIDUOS BIOLOGICOS</p> <p>PROCEDURES</p>	<p>DIA División Industria Animal</p>
<p>PR- PNRB 23</p>	<p>Management of beef sampled for testing for residues of veterinary drugs and environmental contaminants</p>	<p>Versión 1 Revisión 6</p>

Objective

Holding beef sampled for residues and, in case of positive results (violation), destroying it.

Scope

All animals sampled for testing for residue of veterinary drugs and environmental contaminants.

Description

Beef and offal from sampled animal are retained at the establishment until laboratory results are informed.

All Veterinary Inspections (IVO) keep a temporary record of this activity. It is filed until the white sheet of the Sample and Results Form is received.

Products held are only liberated when:

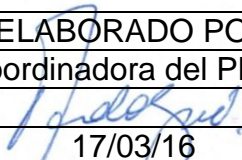

- 1) In the case of samples analyzed at DILAVE (official laboratory), when 17 days after the sample was sent, no positive result (noncompliance) has been communicated to the Coordination.
- 2) In the case of samples analyzed by laboratories belonging to the net (external laboratories), when 35 days after the sample was sent, no positive result (noncompliance) has been communicated to the Coordination.

Therefore, in case communication of a positive result (noncompliance) is received, the products must still be retained until the DIA decides its destination, which will be communicated in writing to the IVO.

Documents involved

Record of holding and retention by IVO, pink sheet of the Sample and Results Form.
