

LYOPHILISED PREPARATIONS

Instructions for use

A) Breaking of ampoules only possible in the axis and over the cut.

1. Hold the bottom part of the ampoule with coloured dot facing front side.

2. Grip the bulb between the thumb and the bent index finger of the right hand.

3. The thumb should cover the dot.

4. Apply force to the top part with the right thumb while resisting with left index finger and snap the ampoule away from you. The force applied should be constant and should not be disproportionate to cause breakage.

(B) Reconstitution of Lyophilised vials

1. Draw the diluent from the ampoule into a syringe, pierce the bung of the vial with the needle and gently inject the diluent into the vial.

2. Detach the syringe, leaving the needle in vial bung. After 15 seconds remove the needle.

3. Rotate the vial gently between your palms till the material dissolves. Avoid shaking the vial as this would cause frothing.

4. Withdraw the reconstituted solution into the syringe, now ready for administration.
